Northern Centre for Healthcare Research (NCH) and previous dissertations

The Northern Centre for Healthcare Research (NCH) was founded in 1986 as a research institute of the University of Groningen (RUG), The Netherlands. Researchers from both the Medical and Social Faculty, with various professional backgrounds, are members of the NCH. These include medical sociologists, medical doctors, psychologists and human movement scientists. Research of the NCH is aimed at optimising quality of life of patients and quality of healthcare, and focuses on (a) determinants of health and illness, (b) consequences of illness, (c) the effects of medical treatment and decision making, and (d) the evaluation of health services and various types of interventions. At the time that this thesis is published, the NCH comprises five research programs.

Until 1998, the NCH covered two research programs, i.e. 'Determinants of Health' and 'Medical Decision Making and Evaluation of Healthcare'. The first program was reformulated in 1996 and was continued as 'Disorder, Disability and Quality of Life' (DDQ). Hence, previous dissertations in this area are listed as part of the present DDQ-programme. The second program was subdivided in 1998 into two new programs, i.e. 'Public Health and Public Health Services Research' and 'Rational Drug Use'.

Dissertations published earlier within the second program are listed retrospectively under these new headings. In 1998, two new programs, 'Rehabilitation Programs Research' and 'Research in Motor Behaviour', were formulated and officially integrated in the NCH in January 1999.

The accomplished dissertations since the start of the programs in 1998 are included in the list. In 2000 the Department of General Practice joined the NCH and together with the Rational Drug Use group initiated a new research program, i.e. 'Research in Evidence Based Medicine'.

More information regarding the institute and its research can be obtained from our internet site: <http://coo.med.rug.nl/nch>.
